

Update from Previous Versions

Learn how to update QwikTest to a newer version.

Follow the below steps carefully to update the QwikTest script.

1. Take a backup of the previous installation
2. Clean the previous installation
3. Upload and extract the new update file from CodeCanyon
4. Check directory permissions.
5. Check and Fix updates in the Maintenance Settings.

Detailed Update Process

Step 1

First things first, back up your files and database of the previous QwikTest installation on your server.

KINDLY DON'T IGNORE. Be make sure to back up your files and database before updating the application. So that if anything goes wrong, you won't lose your data.

Step 2

Goto the QwikTest previous installation directory in the server and delete all the files and folders **EXCEPT** the `/storage` folder and the "`.env file`".

Perform this step only after you take the backup of previous files and database. If you delete the `/storage` folder or the `.env` file by mistake, upload them from the backup.

Step 3

Download the zip file from CodeCanyon and extract it on your local system (PC)

1. Goto the "Upgrade to 1.x.x from 1.x.x" folder.
2. You will find a zip file named "upload_this.zip".
3. Upload this zip file to your server into the previous QwikTest installation directory.
4. Extract the zip file in the same directory.

Step 4

Make sure you have 775 permission to the following directories.

- storage/framework
- storage/logs
- bootstrap/cache

Step 5

Clear the Browser Cache and Open Browser.

Most browsers cache the CSS and JS files, so **DON'T FORGET** to clear the browser cache. Otherwise, updated functionality may not be visible, or you may face a broken layout/white blank screen.

Step 6

Now, we need to run migrations. Visit (<https://yourdomain.com/migrate>) and click the run migrations button.

Migrate Application

If you updated the app with latest files, run migrations by clicking Migrate Now button.

Migrate Now

Once the migration is successful, proceed to the login and fix updates.

Migration Successful

Migration successful. Now, login and fix updates in the maintenance settings.

Login to Fix Updates

Migration Successful Page

Final Step

After updating the application with the latest files, we must fix some settings. You can do that by performing the below steps.

1. Login to the admin account and select **Settings > Maintenance Settings** from the sidebar menu.
2. Then, click on the **Check and Fix Updates** button and confirm the password.
3. That's it! Your application is now updated to the latest version.

Fix App Updates

Check and fix app updates.

After updating the application with latest files, we need to fix some settings. You can do that by using this option.
